EXPERIENCE

Production Engineer

October 2024 — Present

Meta - AI Training (RecSys) Infrastructure

New York, NY

- Fixed a **performance regression** in the job ranker's **critical logging path** that caused **30+ min SLI data lag** — leaving the team blind to incidents — and triggered **MySQL connection exhaustion** and **data loss** across ranking iterations; reduced lag to **under 200s**.
- Scaled a **ML training log stream processing system's** infrastructure to **210 hosts**, reducing log latency from **10 hours to 3 minutes**.
- Built a **fleetwide Python profiling pipeline** to surface GPU efficiency insights across ML training jobs, producing a **technical finding** that **4%** of GPU startup time is lost to imports — providing actionable **technical direction** for codebase hygiene at scale.
- Drove **AI adoption** by building an **agentic workflow** that automated **integration test authoring**, producing a **10k-line test suite** that caught **2 critical incidents**.

Full Stack Software Engineer

February 2024 — August 2024

Atrato (YC 21)

Guadalajara, MX (Remote)

- Resolved a **QPS-induced service reliability** issue on a business-critical endpoint by implementing a **load-shedding queue**, which also unlocked **bulk transaction ingestion** for finance agents — saving **10 hrs/week** in manual operations.
- Delivered *Multicredito* — a **multi-loan BNPL** feature deferred for years due to complexity — by designing and building the **API** and **UI**, enabling users to hold and manage multiple loans simultaneously at independent terms.
- Migrated a **MySQL-backed in-house logger** — whose table had grown unqueryable — to **AWS CloudWatch** with a **codebase-wide refactor** completed in **2 weeks**.

Software Engineering Intern

June 2023 — September 2023

Google - Core Machine Learning Foundations

Sunnyvale, CA

- Built a **benchmarking** application for software and ML engineers to identify **performance regressions** across internal and open-source **ML models**.
- Built a **Python job queue** and **UI** for capacity-constrained **ML performance test** scheduling, replacing a brittle **manual CLI** that failed under load with a **self-service** workflow.

Software Engineer

January 2023 – June 2023

Lizza (YC W22)

Guadalajara, MX

- Rewrote a database migration pipeline in **Go** with a **maximally parallelizable** architecture, cutting runtime from **20+ hours to under 5 minutes (288x speedup)** and unblocking the full deployment of a new backend.

STEP Intern

June 2022 – September 2022

Google - Core Finance Works

Manhattan (remote), NY

- Built a client-side **HTTP cache layer** for an internal **Angular/TypeScript** app, **achieving 40% hit ratio** and improving responsiveness.
- Designed an internal **framework API extension** that improved customizability of auto-generated dropdowns.

Software Developer

January 2022 – June 2022

Atrevi

Guadalajara, MX

- Assumed a **technical leadership** role in a small team building a **personal finance coach** mobile app.
- Architected the **state management** layer for the **React Native** frontend and led the design of the app's **authentication** backbone, backed by **AWS** and a **Django REST API**.

EDUCATION

Tecnologico de Monterrey | GPA 98.17/100 (4.0/4.0)

Guadalajara, Mexico.

B.S Computer Science and Technology

August 2020 – June 2024

TECHNICAL SKILLS

Languages: Java, TypeScript, Go, Python, C++, SQL (Postgres, MySQL), Rust, MATLAB.

Frameworks: React, Angular, Next.js, Django, Spring Boot, Flask, Fast API.

Developer Tools: Claude Code, Git, Neovim, Linux, Docker, Kubernetes, GitHub Actions, Bash scripting.

Libraries: Tensorflow, Matplotlib, NumPy, gRPC, PyTorch
